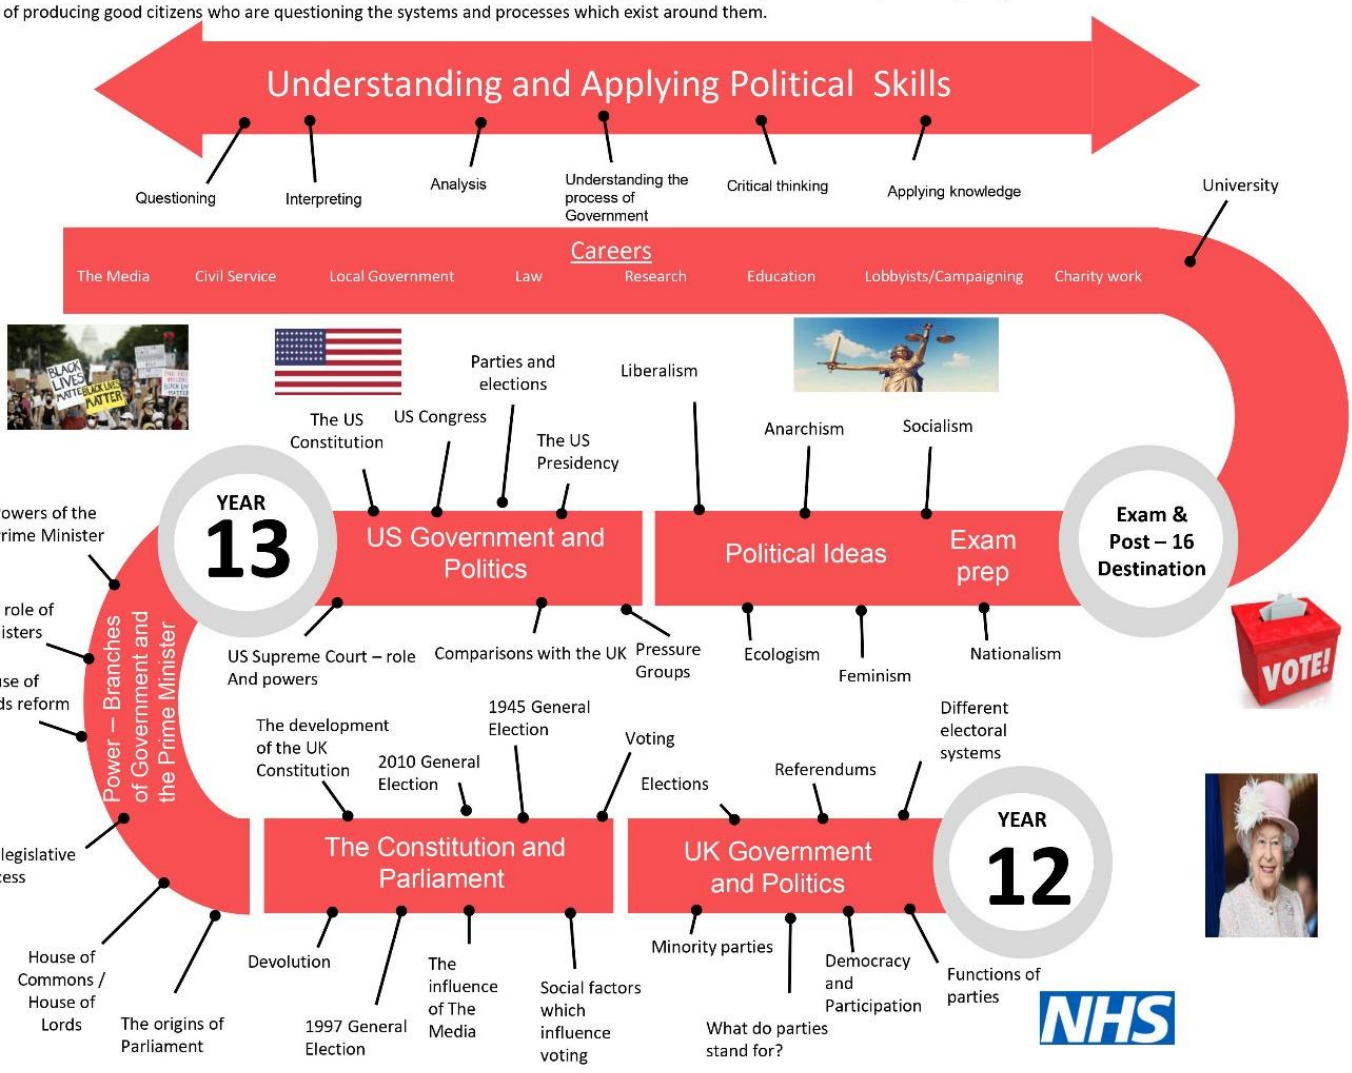
Politics Learning Journey

The Marlborough Science Academy

In Politics we seek to promote an interest and understanding of how the UK and US political systems function and use power, as well as our role in that. We aim to engage our students through small chunked topics, giving them the confidence that they have mastered a topic, and finding the links between topics using up to date examples from current affairs. A focus on gaining knowledge through debate and questioning is key, with the outcome of producing good citizens who are questioning the systems and processes which exist around them.



Subjects that could prepare you for **Politics**
